

# DO YOU LOOK AND FEEL SILLY BEING NUMB?

NOW, THERE'S  
A SOLUTION.

## OraVerse® Phentolamine Mesylate

OraVerse is the **first** and **only** product to rapidly reverse the lingering numbness of the lip and tongue from local dental anesthetic.

OraVerse is administered by your dentist immediately following your procedure to speed up the return of sensation.

**Patients who need to return to normal faster choose OraVerse®:**

- Teachers, Sales professionals, Medical office personnel
- Anyone dealing directly with the public
- Diabetics who need to eat at scheduled intervals to maintain their insulin levels

**Avoidance of soft tissue damage for:**

- Children (OraVerse® is indicated for patients 6 years old and older weighing at least 33 lbs.)
- Patients with special needs

### Important Safety Information

Tachycardia, bradycardia, and cardiac arrhythmias may occur with the use of phentolamine or other alpha-adrenergic blocking agents. Although such effects are uncommon with OraVerse (phentolamine mesylate), clinicians should be alert to the signs and symptoms of these events, particularly in patients with a history of cardiovascular disease. Following parenteral use of phentolamine at doses between 5 to 15 times higher than the recommended dose of OraVerse, myocardial infarction, and cerebrovascular spasm and occlusion have been reported, usually in association with marked hypotensive episodes producing shock-like states. See prescribing information on the back for more information.
